

SteelEye® LifeKeeper® for Linux Software RAID

High Availability Clustering and Disaster Recovery for Linux Software RAID

The SteelEye LifeKeeper family of data replication, high availability clustering and disaster recovery solutions enables enterprises of all sizes to ensure continuous availability of business-critical applications, data and supporting IT infrastructure. SteelEye LifeKeeper for Linux offers enterprise-grade reliability while simplifying implementation with certified and easy-to-deploy solutions for a wide range of applications and databases running on the most common Linux distributions. Through the use of Linux "md" enterprise users can implement a variety of software RAID levels. While software RAID protects your data through replication, SteelEye LifeKeeper provides end-to-end application protection to ensure full availability. The LifeKeeper for Linux Software RAID (md) Recovery Kit enables LifeKeeper-protected applications to take advantage of the benefits offered by software RAID, including lower cost data redundancy, data replication over a SAN and simplified storage management. LifeKeeper for Linux with the Software RAID Recovery Kit provides tight integration between data and application protection.

SteelEye LifeKeeper delivers advanced monitoring of servers, networks, operating systems, applications and data along with

automated healing capabilities based on policies set by system administrators to ensure that applications and data are always available. LifeKeeper for Linux is ideal in environments that run mission critical database and ERP operations and is today protecting Oracle, DB2, MySQL, mySAP, Apache and Sendmail in major corporations world-wide. Supporting the widest range of server and storage configurations from simple LAN clusters to clusters across a Fibre Channel SAN to shared-nothing clusters built around data replication, LifeKeeper lets you deploy the solution that best meets recovery time objectives today while allowing for expansion in the future. With support of both Linux and Windows and the ability to manage both environments from a single console, LifeKeeper can protect the entire IT infrastructure regardless of platform.

Backed by SteelEye Consulting Services

SteelEye offers a full range of consulting and professional services to assist customers in achieving high availability business objectives and to support the deployment of SteelEye products. Services include High Availability Assessment, Solution Design, Configuration/Deployment and Training. We are the HA Experts.

Key Technical Features:

- Full IA32, IA64, AMD64 and storage support for:
 - Dell PowerEdge
 - HP ProLiant and Integrity
 - IBM xSeries, BladeCenter and pSeries-Linux
- Other compatible systems:
 - Linux Distribution Support
 - Red Hat Enterprise Linux
 - Novells SUSE Linux Enterprise Server
- Supports RAID levels 0 (striping), linear, 1 (mirroring), 10, and stacking
- Supports failed dependencies - Disk failure is intercepted by the Software RAID recovery kit to prevent virtual device failure
- Active/Active and Active/Standby configurations of up to 32 nodes
- Data can reside on shared SCSI, single-path or multi-path Fibre Channel SAN or on replicated volumes across either a LAN or a WAN
- Simple interface for manual movement of applications between servers to eliminate outages from planned maintenance
- Data Replication for disk-to-disk back-up, shared-nothing clusters or Linux disaster recovery

About SteelEye Technology

SteelEye is the leading provider of data and application availability management solutions for business continuity and disaster recovery for Linux and Windows and virtual environments.

The SteelEye family of data replication, high availability clustering and disaster recovery solutions are priced and architected to enable enterprises of all sizes to ensure continuous availability of business-critical applications, servers and data.

To complement its software solutions, SteelEye also provides a full range of high availability consulting and professional services to assist organizations with the assessment, design and implementation of solutions for ensuring High Availability within their environments.
